Lab 4: Learning LabView

Introduction

The goal of the lab is to download LabView, learn how to use it, and build the basic hardware circuit. We learned how the software and hardware works together, and how to set up the system. This lab is a sort of “foundation” for labs like lab 6 (using labVIEW for a temperature sensor system). We can use NI hardware and a physical circuit build on a PCB or bread board, and then lab view can read voltages and currents in real time through the hardware and then displays them in the front panel.

Resources used for learning LabView:
